

Sequest Names CAPSYS® as Technology Partner

Sequest Selects CAPSYS CAPTURE as the Document Capture Solution of Choice for its Leading Electronic Medical Records (EMR) Software

Lisle, IL and Colorado Springs, Colo. (October 13, 2009) – Sequest, a leading business solutions and software provider for the health and human services industry, today announced a new technology partnership with CAPSYS. Under the terms of the agreement, CAPSYS will integrate its Web-based, distributed document capture and process management solution with Sequest software products. The union of the company's products will complement the robust functionality already present with Sequest software by providing the ability to easily capture documents electronically from anywhere patient paperwork originates.

Sequest TIER (Totally Integrated Electronic Record) solutions can be economically scaled and customized to fit the unique needs of healthcare organizations while providing the flexibility to grow to meet the changing needs of the future. Sequest provides workflow software solutions for:

- **Behavioral Health**
- **Correctional Healthcare**
- **Substance Abuse**
- **Social Services**

A major addiction treatment facility currently implementing TIER will be among the first customers to benefit from the union of the two company's products.

CAPSYS CAPTURE™ is a thin client application specifically designed for the Internet, giving Sequest users a simple and easy to use enterprise-wide tool for capturing and sharing documents at a lower cost than traditional capture software. The CAPSYS CAPTURE client is a browser-based, thin client that requires no workstation software to be installed or maintained. The software boasts a powerful workflow and design component allowing clients to tailor and manage their capture processes based on the unique application and document type

requirements specific to their business. It allows companies to design their own capture process graphically, without programming or scripting. The ability to deploy powerful advanced capture processing functionality like optical character recognition, barcode recognition and forms recognition are also available to streamline the process of characterizing and indexing documents.

“We are very pleased to have this relationship with Sequest. Capturing documents effectively and efficiently has always been a challenge for any electronic medical records application. By marrying our solutions together, users can now enjoy the benefits of a true electronic medical record for all document types,” stated Greg Cooke, Vice President of Sales and Marketing for CAPSYS.

William R. Connors, MSW, President and CEO of Sequest Technologies said, “It has always been our vision to provide complete solutions for the health and human services industry. With the addition of the CAPSYS document capture solution; we are now able to provide more complete solutions tailored to our client’s needs.” Dan Rizzo, Director of Technical Development added, “We reviewed a lot of technologies and chose CAPSYS of its functionality and ability to integrate seamlessly into our TIER product.”
